

# Different Ways To Display JavaScript Output

JS

# alert()

```
alert("Hello World!");
```

This will display an alert box with the message "Hello World!"

developermitu

# console.log()

```
console.log("Hello World!");
```

This will log the message "Hello World!" to the browser console.

developermitu

# document.write()

```
document.write("Hello World!");
```

This will add the text "Hello World!" to the HTML content of the page.

developermitu

# InnerHTML

```
document.getElementById("output").innerHTML = "Hello World!";
```

This will set the innerHTML of the element with ID "output" to "Hello World!".

developermitu

# window.open()

```
window.open("https://instagram.com");
```

This will open a new window or tab with the URL `"https://www.instagram.com"`.

developermitu

# Recap

- `alert()`
- `console.log()`
- `document.write()`
- `innerHTML`
- `window.open()`
